Reasons for allowance

The following is a statement of reasons for allowance:

Upon further consideration, the inclusion of the claimed apparatus and method for an ink jet recorder, as claimed in the combination, is not found in the prior art. This difference is considered patentable over the prior art and reflects an improvement in the field of endeavor since the following apparatus and method claim limitations reflect an improvement in the field of endeavor and over the prior art of record:

1. A tachograph, comprising: a housing comprising walls defining at least an internal cavity and a top panel, a printing device located within said cavity and comprising a thermal print head and printing material, a transport roll located within said cavity and functionally associated via a force fit to said head such that said printing material is positioned between said transport roll and said head, said transport roll driven by a movement mechanism, a support located within said cavity for supporting said printing device, printing material, transport roll and movement mechanism, said support comprising means for extending said printing device out of said housing, and a support bridge for supporting said thermal print head, said support bridge being pivotably responsive to a spring action, fixed to said top panel.

The Examiner notes while Burkart (US006439903B1) teaches a similar invention, Burkart does not teach the claimed "support bridge for supporting said thermal print head." Burkart teaches a bridge 75 on which is mounted closing element 23 on two

sides of the cardholder 20. The bridge is designed to provide support for a cover rather than support for a thermal printhead. The bridge disclosed by Burkart is designed to disclose a data card rather than a thermal printer (see col 4, lines 61-col 5, line 10).

Further, the Examiner notes while Lais (US006392677B1) teaches a similar invention, Lais is silent regarding a "support bridge." Lais teaches a thermal printhead 29, (see col 3, lines 35-36 and lines 55-62). However, Lais does not teach a support bridge for supporting said thermal print head, said support bridge being pivotably responsive to a spring action, fixed to said top panel, as claimed. Lais discloses the thermal printhead is arranged on a heat sink rather than a pivotal bridge.

One of ordinary skill in the art would not find a rationale to combine the two references to provide the claimed invention since the arrangements taught in each reference cannot be reasonably combined to provide the claimed invention.

Claims 2-13 are allowed since they depend from an allowed base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

After line 1, inserted --This is a continuation of PCT/EP02/00433, filed
01/17/2002.--

This amendment was made in order to place the Application in proper form.
